Free trial antivirus

Lifewire uses cookies to provide you with a great user experience. By using Lifewire, you consent to the use of cookies. Fortunately, internet security companies are struggling with a good fight – constantly updating their software packages to protect against these threats in your online life. The best antivirus choice out there combine the water protection of virus, additional features to keep you safe from scams, and have an absolute doddle to install and use. If you are looking for all rounds of protection against the latest cyber threats, then investing in the strongest software is the best solution you can hope for, and we also have the best business antivirus plans if you are looking to take care of your company's computers. This doesn't mean you have to start spending big money either, as our guide also gives you the cheapest available prices for top software. Cyber Monday deals: see all the best deals right now! And if it's a free antivirus that you're after, we have some top suggestions for you, too. But considering some of the best antivirus providers out there cost less than \$10/£10 a year, we always recommend playing safe and going for a bonus package. Today's top 3 best antivirus software2. Norton - a great protection that doesn't slow you down This is a name almost synonymous with the word antivirus, and Norton didn't disappoint when it came to our testing. It was remarkable how little influence it had on the performance of our test computer. And that's a list of features while your hands. See Transaction3. Kaspersky – no-nonsense suite with top-notch security This may not be quite a feature that pre-providers offer, but Kaspersky really fundamentals brilliantly. Its direct virus protection is airtight, and we like that even its entry-level plan offers protection that spans multiple devices. View DealThe best antivirus 2020 complete: BitDefender offers the most accurate and reliable protection around and has received several awards. (Image credit: Future) TechRadar #1 world that is packed with loads of virus protection providers, and doesn't even cost that much more than free antivirus downloads. If you look at the rankings from the main independent testing labs, you will no doubt notice that BitDefender will inevitably appear on top. And for a good reason - BitDefender's main antivirus engine is excellent, and we found in our testing that it provides top-notch protection. Which, of course, is the main point of any antivirus product. Although not the only consideration by any means, and BitDefender's other main strength is that it positively bristles with the functions. Exactly how many features depend on which product you purchase, although even the entry-level BitDefender Antivirus Plus 2020 packs a lot for the money. As you'll see in our full BitDefender review, which includes a very thorough internet protection module (which offers a class of leading from dangerous links), Safepay online banking protection, password manager, how to as a vulnerability scanner that can alert you to missing security updates and patches. As for the ememes, for only one really worth mentioning is that BitDefender uses more system resources than some competing products. If you want more features, BitDefender Internet Security 2020 provides just that by adding a firewall, spam filter, parental control to keep your kids safe online, with measures to strengthen privacy, such as the anti-webcam hijacking feature. BitDefender Total Security 2020 is the ultimate package that further provides a suite of PC maintenance tools and is able to cover all kinds of devices by delivering apps to Android and iOS hardware as well as Mac (and Windows) computers. This makes Total Security a superb overall value proposition, although it doesn't take away from what BitDefender Antivirus Plus 2020 gives you – which is still a lot of money... Norton Antivirus will protect your pc without a system hog. (Image credit: Future) Norton Antivirus Plus was previously known as AntiVirus Basic, but was updated to AntiVirus Plus back in 2019. It offers top quality viral definitions, and a very light touch when it comes to resource use. In fact, according to PassMark's latest rankings, Norton has the least impact on performance on the PC compared to competing security suites. Features are present at spades, too, with some highlights of top-notch browsing protection, intelligent firewall, PC maintenance utilities (including informative Startup Manager that could streamline your computer's boot times) and a complete backup tool with 2GB of online storage. It's easy enough to use the app, but Norton also offers neat touches to experts that allow a lot of control over the configuration of custom virus scans, and offering elements such as a tool that appreciates the reputation of different files on your computer. Shadows? The interface might have been better thought out, and Norton didn't perform as well as some of our anti-ransomware testing competitors – while it blocked our custom-made threats, we lost some files before. NortonLifeLock (the new brand name Symantec) also provides some beefier security offerings than AntiVirus Plus.Norton 360 Standard adds some impressive extras, including fully integrated VPN, dark web monitoring (US users), more backup storage (10GB) and mobile apps for Android and iOS. If you want to cover more than one device though, you need a Norton 360 Deluxe that allows five devices and throws parental control into the mix. You get a lot of protection money here and it might be worth improving over the 360 Standard subscription. Finally, the top package, norton 360 with LifeLock Select, gives those in the US full identity protection features as well as all of the above. Kaspersky Anti-Virus is comprehensive and easy to use without alienating more expert users (Image credit: Future) Kaspersky Anti-Virus is level of packet from from well respected by the security vendor. It provides coverage for up to five Windows PCs, focusing on basic security essentials, so although it hasn't got the longest list of features – especially compared to some other products highlighted here – what Kaspersky does, it's very good. And this includes a smart self-defense routine, fast and highly configurable virus scans, not to mention great general virus protection (we were surprised by its ability to deal with fresh and undiscovered threats). Its anti-malware options are up there with the best of them. Weaker points are the above mentioned lack of features, and the fact that the additional trimmings, located with Kaspersky Anti-Virus, feel a little unstable. For example, some of the troubleshooting wizards provided have a limited value, such as the Browser Configuration Wizard, which only covers Internet Explorer (almost the most popular browser) these days. You get more with higher-level packages though, with Kaspersky Internet Security providing smart firewalls (which hardly ever hassles you with any issues) and a secure browser (to keep your online financial transactions safe). Perhaps the biggest benefit here, however, is that it applies not only to Windows computers, but also to Mac and mobile devices. Kaspersky Total Security is a leading product that gives you the most comprehensive coverage by adding password manager, parental controls, and automated local backups. These are useful for additional features, and if you believe you don't pay much more for Total Security – indeed, the suite is actually the same price as Internet Security at the time of writing – it's almost certainly worth going up the package. Trend Micro Antivirus offers stable protection, but has strong requirements (Image credit: Future) Trend Micro Antivirus + Security offers simple but effective protection, with a user-friendly interface and a refreshing lack of jargon when it comes to describing the program's features – you can see the full price list below. Antivirus engine is a quality thing – although there's a little disagreement about exactly how good it is, Trend Micro is usually highly valued by the main independent testing laboratory. It offers some tough defenses after real-time behavioral monitoring, and which includes an anti-ransomware system called Folder Shield.In in the past, we've noticed that one of Trend Micro's main drawbacks is that it's a bit of a resource hog. The good news is that this situation has been improving late and we found the latest version of Antivirus + Security only had an average performance effect on our computer (not great, but not as bad as it has been in the past). The next level product, Trend Micro Internet Security, adds some interesting extras such as social networking protection. However, for most folks, it will be worth stepping up to the flagship Trend Micro Maximum provides protection for Mac and mobile devices (up to 10 of them), as well as (plus it adds a password manager and secure file vault). Avira is a powerful antivirus – and our exclusive price makes it even more attractive (Image credit: Future) Avira is probably best known for its free antivirus option (which is one of the best out there), but its premium packages may not be sniffed at – especially if you consider the incredible price you can now pay for your Antivirus Pro package. This is the name of Avira entry-level antivirus, and it includes everything you expect from today's security program. So there's a real-time scan of everything you download, torrent, drag from the cloud and upload from USB; special protection against ransomware; and file shredder for additional confidentiality. There is not a huge amount beyond these basics – you'll have to upgrade to either its Internet Security or Prime plan to start adding additional features such as password manager, VPN, PC cleaning tools and mobile app support. But Avira is really impressed by the independent test good like AV-Comparatives, which gave it a 100% score for vanquishing threats. And super cheap price that you can now get Antivirus Plus, it makes your decision very easy on whether to go for this instead of its free option... Webroot SecureAnywhere AntiVirus is very unclaimable without compromising protection (Image credit: Future)Operating system: Windows and Mac | Maximum equipment covered: 3 | Stand out features: Always-on security, identity protection, real-time anti-phishing, firewall monitorVery well-featuredIn an incredibly streamlined appSuperfast virus scansLimited testing data from independent laboratoriesOnly for every antivirus tool claims to be lightweight, but Webroot SecureAnywhere AntiVirus really delivers this front. Installation takes seconds and it uses only 15MB (yes, megabytes) of hard disk space – plus the app's memory footprint is just as tiny, with virus definitions stored in the cloud. With that in mind, there's no compromise on the features that make Webroot even more impressive. SecureAnywhere AntiVirus gives you solid malware protection – although it's not ranked by big name testing labs – and very fast virus scans, along with smart firewall monitoring system, accurate real-time anti-phishing, identity theft protection and much more. Further up to the Webroot range, SecureAnywhere Internet Security Plus extends coverage from Windows and Mac computers to mobile devices, as well as providing a password manager (courtesy of LastPass) and covers up to five devices (instead of three). And at the top of the tree is Internet Security Complete, which introduces an automatic backup tool (with 25GB cloud storage) and additional online privacy features. SecureAnywhere AntiVirus gives you everything you need, really, although Internet Security Plus is the top pick for the most rounded package. Another boon worth bearing in mind here is Webroot's confidence in instive long 70's 100% money back guarantee. Today's Best Webroot SecureAnywhere SecureAnywhere offersthe most famous free antivirus is a fantastic paid-of version of Avast Premium (Image credit: Shutterstock) Avast's Premium Security adds a hefty load of features above the company's famous free antivirus offering. This includes - but not limited to - effective Ransomware Shield, very thorough anti-phishing protection, secure browser, password manager, file shredder, and even Wi-Fi inspector to look for vulnerabilities in your network. It's a crowd-pleasing choice, of course. Premium Security is also highly configurable, even down to the installation process, which is a major boon. And while its antivirus options get a slightly mixed rating from independent testing laboratories, they should turn out to be solid enough. There is one issue you definitely need to be aware of though; namely that we observed some slowdown in our system sometimes when running Avast.Avast Ultimate is another option that gives you Premium Security bundled with Avast's SecureLine VPN and a few other extras. If you want a VPN – which is decent enough to offer – then the Ultimate package is definitely worth considering. (Image credit: Shutterstock) Operating System: Windows and Mac | Maximum equipment covered: 10 | Stand out features: Central control console, AI-powered threat detection, advanced ransomware protectionBitly antivirus engineThing value to protect many PCs.Lack capabilitiesClunky interface in some respectsSophos Home Premium covers (up to) an impressive 10 devices (Windows and Mac computers). This is designed with beginners in mind, which is not a bad thing, although experts may find the interface oversimplified, and are disappointed that there are some options or low-level tweaks on offer. The UI is also pretty clunky in some ways – although said the internet management console could be great for those who want to control and manage what are not tech-savvy family members' devices. Sophos provides capable anti-virus protection, and worked well, passing our own anti-ransomware tests. On the protection of offerings – and given the 10 device ceilings – Sophos Home Premium could work as a great value proposition for those who want to protect multiple computers. ESET NOD32 Antivirus may lack features, but it offers power antivirus protection (Image credit: Future)Although ESET Antivirus and especially its NOD32 plan does not have everything that many features are highly configurable. Beginners will find it a tough program to work with in some ways, but experts will love the level of control available here. In addition, streamlined programs for slender system footprint are another major plus point too. It also boasts some of the best heuristic detections around, as well as some quality URL filtering. Keep in mind, however, that some independent testing laboratories have produced somewhat worrying reports showing that ESET protection is a bit unstable, while others have come to more positive conclusions. ESET is a higher-end package on ESET Internet and Smart Security Premium, and they add a good combination of features, but some of these extras are underpowered – and on balance, NOD32 Antivirus represents a pick of the bunch. The best free antivirus downloadsPay for premium service means that you get more features like spam filters, parental controls, system scanning and additional firewalls. This makes them more suitable for energy users, for those who want a bit of extra security and for anyone who needs their system to function as smoothly as possible. It also means that you avoid the annoying pop-ups that try and tempt you to upgrade to the full version. And as you've discovered before, they don't cost you an arm and a leg. In fact, these days you can get the highest quality protection absolutely free, just for every major seller out there offering free antivirus. In doing so, developers access more devices from which they can collect data, and therefore improve their

knowledge and security platforms so it is really not in their best interest to reduce the amount of protection provided by the free version. Windows has come a long way in terms of security, but it's still fair to say that Windows 10's built-in solution for Windows Defender is the last free AV program you need to trust to keep your system clean. Avira Free Antivirus is today's best free security download If you are committed to receiving free antivirus, we recommend you go our pick of the best security downloads - Avira Free Antivirus. We have highlighted our list of long functions below, along with information on how well it performs in independent testing laboratories. Very impressive freebie. View DealBest free antivirus 2020 at a glanceAvira Free AntivirusBitdefender Antivirus Free EditionKaspersky Free AntivirusSophos HomeAvira Free Antivirus is still an excellent free antivirus suite Operating system: Windows, Mac, Android, iOS | Features: Virus detection, phishing protection, Built-in VPN, System Optimization ToolsRaining effect on system performanceGreat detection speedsUpdest Long function listUse some windows when runningAvira Free Antivirus for Windows continues to score heavily on AV-TEST rigid testing program, quashing 99.7% of the tested threats, and it's usually not too much burden on your hardware. It's a pretty good freebie, and why do we have no qualms at all in the name #1 free antivirus download. As well as essential security smarts, we also love a clean, friendly interface and the fact that it has achievements in throwing up minimal false positives. The introduction of a free security kit to optionally run along with it – with anti-ransomware and 500MB/month free VPN and various speedup promises – just sweetening the deal. In fact, the list of features more co-ally fully paid premium package. It throws identity protection, password manager, anti-scam protection to Phishing attempts, and even pc cleaner to keep your system and span. If there's one thing we could change, then that's it then overeager badgering - although windows and ads are very common free products and this does not prevent us from wholeheartedly call up Avira Free Antivirus.Review and where to download: Avira Free AntivirusBitdefender Antivirus Free edition has made the top spot in our free antivirus roundup. This is the best free security software you can download today Operating System: Windows, Mac, Android | Features: Phishing Protection, Behavioral Analysis, Automatic ScanningFast ScanGreat Virus DetectionSpain users may want more controlScans not scheduledEssentially consists of av section full product, Bitdefender Antivirus Free Edition has clean, lightweight, well-designed scanning mechanisms – which are almost universally faster than industry average – and unparalleled virus definitions mean Bitdefender is a free antivirus force to be reckoned with. The free version of insistence on running autopilot mode is a double-edged sword, making the process of virus management easy while taking it out of the user's hands; while we are inclined to trust, there have been cases in the past of automatic systems going a little rogue, such as an incident a few years ago when Panda Antivirus identified itself as a virus and blocked a large number of Windows systems. AV-TEST testing had read some of the flaws in its handling of zero-day threats, however. And it's worth pointing out that you can currently get our top rated paid for solution – Bitdefender Antivirus Plus – for the equivalent of about \$2 per month. This is a tiny amount to be paid for a ton of additional features such as online banking protection, integrated password manager, permanent file shredder and free online 24/7 support. Overview and where to download: BitDefender Antivirus Free EditionJaulita version of Kaspersky is a very successful antivirus software Operating system: Windows | Features: Real-time scanning, Anti-phishing, Email Scanning, Spyware ProtectionSleeping, trusted antivirus engineUser-friendlyBasics just feature setLimited technical supportPait for a version of Kaspersky Windows security software often tops charts for the best virus prevention solutions and AV-TEST again gave it full marks across the board in its latest round of testing. As you might expect, Kaspersky Free is a reduced version of the full program - a tool that we really like (more on the subject below). The free version ditches additional features such as privacy protection and secure payment sandboxes to focus on powerful, no-frills and - most importantly - free protection for your computer. The result is extremely easy to use and navigate a bit of software that does an effective job of keeping you protected from viruses. Using nuts and bolts for a real-world scanning engine paid-for suite, Kaspersky Free is fiendishly difficult for viruses and Trojans to break down. And we love that it doesn't constantly pester you nudges to improve to the fullest ironically, we only take a moment because Kasperksy Anti-Virus is not expensive to buy and still provides much better protection for your computer (or computers). The standard price is \$29.99 to protect three computers and include more muscle when it comes to preventing ransomware, spyware and Trojans.Review and where to download: Kaspersky FreeFollowing for its takeover of AVG Avast is now benefiting from a much larger userbase, all reporting information about new security threats to Avast and AVG has not yet fully merged, despite the former acquiring the latter in mid-2016. The recently merged company says that two free antivirus products will remain separate, although soon there is a common AV package. Apparently, though, Avast now has a lot more data to work with, having expanded its efficient userbase (and therefore its threat detection network) to a whopping 400 million users. The latest edition of Avast Free Antivirus adds automatic gaming mode to turn off windows and reduce system load when you're firing up a processor hungry game that's very handy indeed, and the interface is given a clean new overhaul. There's also a password manager that is undeniably a good addition to your security portfolio. It also scores on AV-TEST's extensive malware benchmark and continues to clean sweep against 0-day attacks – perhaps that expanded detection network is really helping. Less impressive is the slight negative impact Avast has on software launch times, and its somewhat popup heavy attitude. Overview and where to download: Avast Free AntivirusSophos Home provides enterprise-level antivirus protection for home users Operating system: Windows, Mac | Features: Virus detection, phishing protection, parental control, protects up to 10 computersSimple and non-intrusiveGood cloud-based controls on protected devicesFrom scan schedulingRestrained controls for advanced usersMalas as business class security, Sophos Home is not a little more than most free antivirus software, and actually seems better suited for families. You get standard protection against viruses and malware protection, as well as browser tools such as anti-phishing and, most importantly, content control. Combined with central management for up to 10 PCs, it means that you can effectively block your children's browsing capabilities. Although AV-TEST has not been formally assessed for Sophos skills, fellow lab AV-Comparatives offers a decent rating for its capabilities. Although Sophos Home has always had desktop notifications, there was no premium version of the software for it to facilitate the upgrade to. This changed in February with the launch of Sophos Home Premium.Review and where to download: Sophos HomeHead back up to read about our number one recommended best antivirus ^ Best business antivirus 2020Using entry in this list has been carefully selected for its business features, remote control and central control. The best business antivirus software will be enterprise-level protection against but that doesn't mean they have to cost a lot of money either. The price for each installation can sometimes be cheaper than even our recommended best antivirus packages.1. Avast Business Antivirus Pro Excellent business antivirus suite that provides a variety of tools such as virus protection, firewall, email protection, anti-spam and the ability to sandbox applications for complete security. Avast Business Antivirus Pro (as opposed to standard Avast Business Antivirus) also includes Sharepoint and Exchange protection, as well as several tools for your servers.2. BitDefender GravityZone Business Security This package makes reliable protection your highest priority. Bitdefender products are loved by independent testing of labs, highly rated for malware detection, removal, performance and usability. Most features work automatically – anti-malware, firewall, web consultant, URL filtering – but you can also customize the product to control user activity. 3. Symantec Endpoint Protection Symantec's first benefit is insight file reputation technology, an effective way to detect and block even the latest undiscovered threats. Other layers of protection include virus protection, behavioral monitoring, intrusion protection, firewall and Power Eraser to prevent stubborn threats and repair the system. 4. For Avira Antivirus endpoint This is Avira's main small business product. It takes all the main features you'd expect – antivirus, baseline network protection, internet filtering – and extends them with file server protection and optimization, as well as application whitelisting and blacklisting. 5. Kaspersky Endpoint Security Cloud Small company product that is ready to protect Windows computers, file servers, Android and iOS devices. Packages on the desktop side are all the usual quality Kaspersky modules – antivirus, antispams, firewall, more , but mobile security technologies are even more impressive. Head back up to read about our number one recommended best antivirus ^ Even if you own the best computer in the world, you're still at risk
